PUDining – Eisenhower Matrix

Purdue Dining Court favorites tracker (Java). The DO quadrant is the MVP.

	Urgent	**Not Urgent**
Important	**DO (MVP)** • Hard code the first big 5 dining courts (Earhart, Ford, Wiley, Hillenbrand, Windsor) • Fetch todays menu for each court using Dining API from PURDUE • Load favorites from favorites.txt • Match the favorites so that it loosely matches some and adds them while 1:1 matches have more value • Count matches and return the highest scoring court • Handle Errors	**SCHEDULE (V2.0+)** • Show which meal the favorite is served at and where. • Check the whole week not just today to make a plan • Add or remove favorites easily with commands • Filter by dietary options like vegan or vegetarian • Cache each day's menu so it isn't calling the API every turn • Write JUnit tests for logic
Not Important	**DELEGATE (Use a library)** • HTTP requests → java.net.http.HttpClient • JSON parsing → Gson • Dates → java.time.LocalDate • Reading files → java.nio.file.Files • Testing → JUnit 5 • Build and dependencies → Maven or Gradle • Daily auto-run → Windows Task Scheduler or cron • Version control → Git and GitHub	**DELETE (Cut it)** • Mobile APP • GUI or Web dashboard • AI food recommendations • Calorie tracker or nutrition tracker • Text or email updates • User accounts and login • Food ratings • Retail dining
